

Do I need to pre-clean my parts prior to sending them to SilcoTek for coating?

Your parts are precision cleaned by SilcoTek prior to processing. Additional pre-cleaning by the customer is often unnecessary and at times can be detrimental to our coating process.

In order to provide the highest quality coating and fastest processing; notify SilcoTek of any prior chemical exposure (regardless of whether the part is new or used). Chemicals like cutting oils, pickling acids, solvents, water based cleaning compounds or other hazardous or non hazardous chemicals may impact the coating process. Many times the customer's cleaning process or chemical exposure can be eliminated, saving the customer time and money. Before sending parts to SilcoTek, please complete the following checklist and include it with your order or contact your SilcoTek representative at silcod@SilcoTek.com or call us at (814) 353-1778.

Chemical exposure checklist:

- Hazardous chemicals: (please list) _____
- Cutting oils: (list if known) _____
- Pickling acid: (list if known) _____
- Cleaning solvents: (list if known) _____

Additional comments:

Please complete this form and attach it to your order.
